

## Energy Audit Program by ECCJ

Several audit experts make an interview with the persons in charge about the management standards for the factory or building which is going to have an energy audit. Then, they make an on-site survey how the facilities in the factory or building are operated. After the survey, they draw up a list of areas which need remedies and give advice for energy saving potential and needed actions. This energy audit program is conducted free of charge by the Energy Conservation Center Japan.

### (1) Energy audit for factories

The total number of factories which received the energy audit service is 3,528 from FY1998 to 2009.

The target factories are ones in the category of “Type 2 Designated Energy Management Factories” by the Energy Conservation Law and undesignated factories whose annual energy consumption is 100kL or more of crude oil equivalent.

### (2) Energy audit for commercial buildings

The total number of buildings which received the energy audit service is 3,578 from FY1998 to 2009. During this period, the target buildings were ones in the category of “Type 1 Designated Energy Management Factories”.

From FY2008, the target buildings are ones in the category of “Type 2 Designated Energy Management Factories” by the Energy Conservation Law and undesignated buildings whose annual energy consumption is 100kL or more of crude oil equivalent.
